ATTACHMENT NO. 6

MAHSR-P-3: REVISED DRAWINGS

Sl.No	Drawing Number	Title	Revision Items
1	DD-JIC-C06-TDC-B06-BRD-B60- 11003 001	GAD11 Superstructure Coordinate Drawing (Part1)	LCX box deleted.
2	DD-JIC-C06-TDC-B06-BRD-B60- 11107 001	GAD11 General Superstructure Drawing (Part7)	LCX box deleted.
3	DD-JIC-C06-TDC-B06-BRD-B60- 11405 002	GAD11 P1(A)・P5(A) Detail of Elastomeric Bearing	Steel plate grade E250 changed as E350 and Bearing notes are modified.
4	DD-JIC-C06-TDC-B06-BRD-B60- 11406 002	GAD11 P2・P4 Detail of Elastomeric Bearing	Steel plate grade E250 changed as E350 and Bearing notes are modified.
5	DD-JIC-C06-TDC-B06-BRD-B60- 11407 002	GAD11 P3 Detail of Elastomeric Bearing	Steel plate grade E250 changed as E350 and Bearing notes are modified.
6	DD-JIC-C06-TDC-B06-BRD-B60- 11410 001	GAD11 Detail of Stopper at P1(A) P5(A) (Part1)	List of material table no. 2, 3 & 5 (Material column B0 Grade is added instead of A) and no.1 (Material column B0 Grade is deleted)
7	DD-JIC-C06-TDC-B06-BRD-B60- 11501 002	GAD11 P1 Pier Substructure General Drawing (Part1)	LCX box deleted.
8	DD-JIC-C06-TDC-B06-BRD-B60- 11514 002	GAD11 P2 Pier Substructure General Drawing (Part1)	LCX box deleted.
9	DD-JIC-C06-TDC-B06-BRD-B60- 11526 002	GAD11 P3 Pier Substructure General Drawing (Part1)	LCX box deleted.
10	DD-JIC-C06-TDC-B06-BRD-B60- 11538 002	GAD11 P4 Pier Substructure General Drawing (Part1)	LCX box deleted.
11	DD-JIC-C06-TDC-B06-BRD-B60- 11550 001	GAD11 P5 Pier Substructure General Drawing (Part1)	LCX box deleted.
12	DD-JIC-C06-TDC-B06-BRD-B60- 11701 001	GAD11 Earthing Arrangement for End Pier	LCX box deleted, G.I Binding wire changed as copper binding wire on Details of Part'b' and notes are modified.
13	DD-JIC-C06-TDC-B06-BRD-B60- 11702 001	GAD11 Earthing Arrangement for Middle Pier	LCX box deleted, G.I Binding wire changed as copper binding wire on Details of Part'b' and notes are modified.
14	DD-JIC-C06-TDC-B06-BRD-B60- 11703 001	GAD11 Earthing Arrangement for Intermediate Pole	LCX box deleted, Steel plate t=10mm added on Details of Part'a' and notes are modified.
15	DD-JIC-C06-TDC-B06-BRD-B60- 11706 001	GAD11 Structures of Ducts (Part1)	LCX box deleted.
16	DD-JIC-C06-TDC-B06-BRD-B60- 11707 001	GAD11 Structures of Ducts (Part2)	LCX box deleted and notes are modified.
17	DD-JIC-C06-TDC-B06-BRD-B60- 11708 001	GAD11 Structures of Ducts (Part3)	LCX box deleted and notes are modified.
18	DD-JIC-C06-TDC-B06-BRD-B60- 11709	**DELETED**	**DELETED**
19	DD-JIC-C06-TDC-B06-BRD-B60- 11710 001	GAD11 Ducts Bar Arrangement Drawing (Part1)	LCX box deleted and notes are modified.
20	DD-JIC-C06-TDC-B06-BRD-B60- 11711 001	GAD11 Ducts Bar Arrangement Drawing (Part2)	LCX box deleted and notes are modified.
21	DD-JIC-C06-TDC-B06-BRD-B60- 11712 001	GAD11 Water Stopper Concrete Drawing	LCX box deleted.
22	DD-JIC-C06-TDC-B06-BRD-B60- 11713 001	GAD11 Adjusting Concrrete for Electrical Cable Duct (Part1)	LCX box deleted.
23	DD-JIC-C06-TDC-B06-BRD-B60- 11723 001	GAD11 Drainage Plan (Part1)	LCX box deleted.
24	DD-JIC-C06-TDC-B06-BRD-B60- 11728 001	GAD11 Cable Crossing Pipe Conduits	LCX box deleted.
25	DD-JIC-C06-TDC-B06-BRD-B60- 11729 002	GAD11 Noise Barrier / Precast Fence	This Drawings has changed with referance to C4 Package
26	DD-JIC-C06-TDC-B06-BRD-B60- 11730 001	GAD11 Drainage Slope Drawing (Part1)	LCX box deleted.
27	DD-JIC-C06-TDC-B06-BRD-B60- 11732 001	GAD11 Bridge Name Paintings and Posts Drawing	LCX box deleted.

GAD11 Superstructure Coordinate Drawing (Part1)

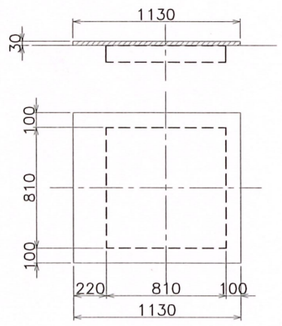
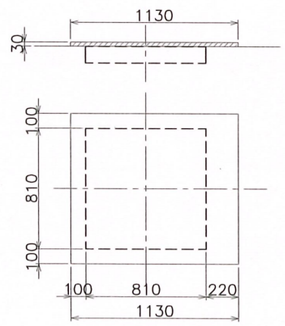
Part "A"
Scale 1:2



P1 Pier Bearing
P2 direction



P5 Pier Bearing
P4 direction

Embeded Form Plate
Scale 1:80

Note: 1. Based on material procurement in India, the 2 mm and 9 mm steel thickness of members can be changed to a higher thickness by the contractor.
2. According to 1, the following measures should also be taken if the thickness is changed:
(1) Any increase in the total thickness of the rubber shoe resulting from the change of steel thickness should be adjusted with the thickness of the concrete pedestal, and the embedding depth from the surface of the pier cap should be fixed at 30 mm.
(2) When adjusting the thickness of the concrete pedestal in (1), 50 mm of covering should be secured from the upper surface of the concrete pedestal against [Superstructure Design Drawing N1, 2, 3 reinforcement bar (D12), Substructure Design Drawing h1 reinforcement bar (D12)]
3. Steel plate for lifting shall be provided with a threaded hole for lifting bolt.

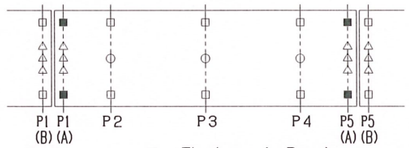
Design conditions

Max. reaction force per bearing (Rmax)	4600 kN
Min. reaction force per bearing (Rmin)	2400 kN
Shifting amount	76 mm

Material table

Part No.	Part Name	Material	Quantity	Mass(kg)	Remarks
1 set	Elastomeric Bearing	Chloroprene Elastomeric and E350	1	208.3	0.8 N/mm²

Layout



□ : Elastomeric Bearing
○ : Viscous fluid resistance Damper stopper
△ : Steel stopper

Release from shear deformation
1. Jacking up P1 and P5, then release the deformation of the bearing. Jacking up shall be after completion of the structures on the slab.
2. After at least three months pass from the erection of a beam, the beam shall be jacked up to release Elastomeric bearings from shear deformation.
3. Jacking up control value shall be or more 3.0mm.
4. If the timing of jacking up differs from the designed schedule, computation and a review will be necessary.

About the Elastomeric quality specification

1) Testing of Elastomeric shall be done at normal temperature.
2) Among the symbols that are described in the column for test specimen dimensions, "a" and "b" indicate the side lengths of Elastomeric Bearing, and "te" indicates the thickness of Elastomeric.

Notes;
1. The quality specification of Elastomeric and the test results assuring the performance of Elastomeric bearing shall be submitted.
2. A plate indicating the Elastomeric bearing manufacturer and the date of manufacturing shall be attached on a side surface of the relevant beam.
3. The Elastomeric baring shall be of coated type, and the coating Elastomeric to be used shall have properties to prevent rust on reinforcing steel plates and to make the reinforcing steel plates fit well with the beam. The coating thickness on the side of the Elastomeric bearing shall be 5 mm or more.

About the Embedded Form Plate
1. In principle, embedded form plate shall only be used in a 100-mm range on the outside of the bearing at the top of the bearing.
2. The material of embedded form plate shall have the strength, elastic coefficient, shear elastic coefficient, and durability equivalent to those of the concrete of the beam body, and enable the form plate to keep flatness against the bearing stress given from supporting points.
3. The embedded form plate shall be of single-plate type, and a measure shall be taken to prevent mortar from flowing out at the connection with other form plate.
4. The top surface of embedded form plate to be joined with the beam concrete shall have a structure that enables the form plate to be integrated with the beam concrete, so as to prevent detachment from the beam.
5. The bottom surface of embedded form plate to contact with the Elastomeric bearing shall have an appropriate frictional property.

NOTES :
1. ALL DIMENSIONS ARE IN MM, EXCEPT LEVELS, WHICH ARE IN METRES, UNLESS OTHERWISE MENTIONED.

Design conditions

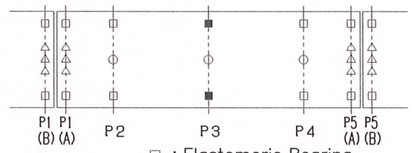
Max. reaction force per bearing (Rmax)	6200	kN
Min. reaction force per bearing (Rmin)	5000	kN
Shifting amount	---	mm

Material table

Part No.	Part Name	Material	Quantity	Mass(kg)	Remarks
1 set	Elastomeric Bearing	Chloroprene Elastomeric and E350	4	556.8	0.8 N/mm²

Layout



□ : Elastomeric Bearing
○ : Viscous fluid resistance Damper stopper
△ : Steel stopper

Release from shear deformation

1. Jacking up P1 and P5, then release the deformation of the bearing. Jacking up shall be after completion of the structures on the slab.
2. After at least three months pass from the erection of a beam, the beam shall be jacked up to release Elastomeric bearings from shear deformation.
3. Jacking up control value shall be or more 3.0mm.
4. If the timing of jacking up differs from the designed schedule, computation and a review will be necessary.

About the Elastomeric quality specification

1) Testing of Elastomeric shall be done at normal temperature.
2) Among the symbols that are described in the column for test specimen dimensions, "a" and "b" indicate the side lengths of Elastomeric Bearing, and "te" indicates the thickness of Elastomeric.

1. The quality specification of Elastomeric and the test results assuring the performance of Elastomeric bearing shall be submitted.
2. A plate indicating the Elastomeric bearing manufacturer and the date of manufacturing shall be attached on a side surface of the relevant beam.
3. The Elastomeric baring shall be of coated type, and the coating Elastomeric to be used shall have properties to prevent rust on reinforcing steel plates and to make the reinforcing steel plates fit well with the beam. The coating thickness on the side of the Elastomeric bearing shall be 5 mm or more.

About the Embedded Form Plate

1. In principle, embedded form plate shall only be used in a 100-mm range on the outside of the bearing at the top of the bearing.
2. The material of embedded form plate shall have the strength, elastic coefficient, shear elastic coefficient, and durability equivalent to those of the concrete of the beam body, and enable the form plate to keep flatness against the bearing stress given from supporting points.
3. The embedded form plate shall be of single-plate type, and a measure shall be taken to prevent mortar from flowing out at the connection with other form plate.
4. The top surface of embedded form plate to be joined with the beam concrete shall have a structure that enables the form plate to be integrated with the beam concrete, so as to prevent detachment from the beam.
5. The bottom surface of embedded form plate to contact with the Elastomeric bearing shall have an appropriate frictional property.

Note: 1. Based on material procurement in India, the 2 mm and 9 mm steel thickness of members can be changed to a higher thickness by the contractor.
2. According to 1, the following measures should also be taken if the thickness is changed:
(1) Any increase in the total thickness of the rubber shoe resulting from the change of steel thickness should be adjusted with the thickness of the concrete pedestal, and the embedding depth from the surface of the pier cap should be fixed at 30 mm.
(2) When adjusting the thickness of the concrete pedestal in (1), 50 mm of covering should be secured from the upper surface of the concrete pedestal against {Superstructure Design Drawing N1, 2, 3 reinforcement bar (D12), Substructure Design Drawing h1 reinforcement bar (D12)}
3. Steel plate for lifting shall be provided with a threaded hole for lifting bolt.

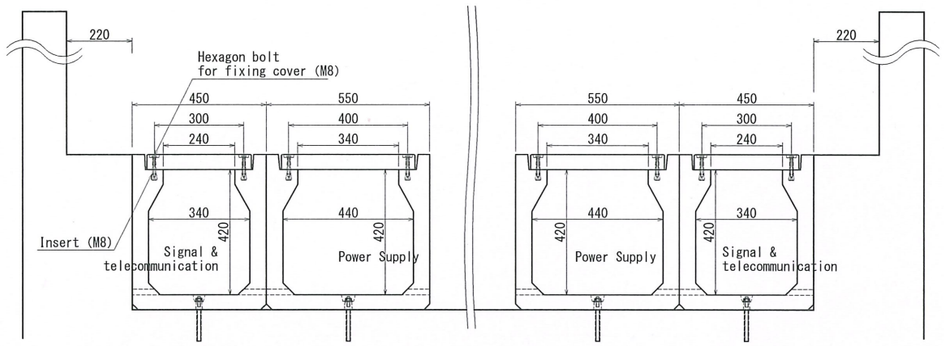
Drawing No.: DD-JIC-C06-TDC-B06-BRD-B60-11703 001

GAD11 Structures of Ducts (Part1)



1. Purpose

Cable ducts are constructed to lay and set the cables for signal, communication, and power supply.

2. Details of construction

- In addition to the cable ducts, the covers of cable ducts and the bolts to fix the covers shall be prepared.
- The covers of cable ducts and the bolts to fix the covers shall be delivered to the electrical work office as per instruction of the Engineer.
- The cable ducts shall also serve as the passages for maintenance.
- The cable ducts shall be constructed for up and down tracks at stations and in the open section.
- If the cable ducts are detoured because of another structure. the space between the cable duct and another structure shall be filled up.
- The bending angle of detoured cable ducts shall be ≦ 30 degrees for power and communication cable duct.
- If the cable ducts have a gap at a expansion joint on viaduct, the gap shall be closed by a channel steel plate installed inside the cable ducts (the channel steel plate shall be fixed only at one end to accommodate expansion and contraction due to temperature variation). Also, the head structure of fixing bolts shall be designed in such a way not to damage cables.
- If the cable ducts have unevenness in height at joint, the cable ducts shall be sloped. (The limitation of slope angle shall be the same as that of the bending angle.)
- An appropriate drainage measure shall be taken to prevent rain water get accumulated in the cable ducts, for example, making drainage holes at appropriate intervals in the cable ducts according to the drainage specification of the civil design.
- Cable ducts (Signal & Telecommunication Cable with power supply cable ducts) are made of Precast – RCC (M75 Grade).
- To prevent cable ducts and their covers from being blown away by wind pressure of train, the covers shall be fixed with M8 hexagon bolts, and the main bodies of cable ducts shall be fixed with anchor bolts. The structures of bolt heads shall be designed carefully to prevent stumbling over the bolts and damage to cables.

NOTES ;
1. Purpose
   The Cable Crossing Pipe Conduit are constructed to install warning switches on the sound barrier.
2. Details of construction
   - The construction work for handholes, cutouts, and Cable Crossing Pipe Conduit shall be consigned to electric section.
   - A measure shall be taken to prevent water from entering in the Cable Crossing Pipe Conduit.
3. Others
   - The structure of cable duct shall be designed to prevent water from staying in the cable duct.
   - The FEP to be used for the Cable Crossing Pipe conduit shall be flame-resistant.
   - A guide wire shall be run through each Cable Crossing Pipe Conduit.
   - Care shall be taken not to damage the insert fittings and cover hooks for fixing the cover.
